

Job Scraping API

About

This project enables job scraping from LinkedIn and Indeed using **BeautifulSoup** and **Selenium**. It provides a powerful backend API that scrapes job data and serves it to a browser extension frontend.

- ☒ Scrapes job listings using automation tools.
-  Backend is already deployed and functional.
-  Frontend (Chrome Extension): [Job_Scraping_Extension_Frontend](#)

Frontend Preview

Repository Structure

- **.env** – For storing environment variables (API keys, credentials, etc.)
- **api.py** – Main API file with all backend routes and scraping logic.
- **requirements.txt** – Contains all required Python packages.

Getting Started

1. Clone the repository

```
git clone <your-repo-link>
```

2. Navigate to the project folder

```
cd .\Scrape_API\
```

3. Create a virtual environment and activate it

```
python -m venv venv  
.\venv\Scripts\activate
```

4. Install the required packages

```
pip install -r requirements.txt
```

5. Start the FastAPI server using Uvicorn

```
uvicorn api:app --reload
```

 Frontend (Browser Extension)

You can find the Chrome Extension (frontend) here:
